## What is the WUI?

The WUI is the zone of transition between unoccupied land and human development. It is the line, area, or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels

While the wildland urban interface (WUI) is a term commonly known in areas that experience wildfires, it may not be common to your fire department.

You may believe that you don't have a WUI problem, and that WUI fires only occur in Western states, but here are the facts:

More than **70,000 communities** in the United States are at risk for WUI fires.

In 2021 over **7 million acres** burned and nearly **6,000 structures** were lost to WUI fires in the United States.

The WUI area continues to **grow by approximately 2 million acres** per year.

**SaferWood** treated with **Thermex-FR** by Chemco is Compliant per § 2303.2 of the IBC and ignition-resistant per 2018 IWUIC Section 503.2, Item 3, FRTW, and may be used in the exterior design and construction of buildings under the IWUIC where an ignition-resistant material is required.

Quality

Ignition-Resistant

Non-Toxic
